→ <https://alphanodes.com/redmine-db>

Finally a good solution for your project team to get rid of outdated spreadsheets

The Redmine DB plugin makes it easier for organizations and companies to manage any kind of entries and data for your projects within Redmine. The Add-on gives you control over all assets or information you need to manage in your company that is not an issue, task, bug etc.

Manage assets, items, information of any kind. Redmine DB provides total freedom to create a solution that is right for your business.

Redmine DB Plugin

Product Overview

Redmine DB is built to meet diverse needs of modern companies that want to digitalize their organisation and manage any assets or information within it's team in one central place.

Redmine DB unleashes the power of Asset and Information Management with the Open Sourc Project Management platform Redmine.

Use insights for everything that aren't issues.

Usual suspects in every organisation are typically hardware like servers, laptops, computers, phones. As well as software like product licences or validation keys, SSL certificates, contracts, facilities, people etc.

But Redmine DB can be used for many other things or information thanks to its flexible custom fields.

It's used in a variety of business areas such as industry, educational institutions, science, marketing, human resources management, business administration etc.

The integration with Redmine gives you total control of changes and access to your assests and stored information within Redmine DB Plugin.

Regardless of what type of asset or information you need to manage – Redmine DB is the best solution for Redmine to provide you with total freedom to create a solution for almost anything that is important to your team and replaces cluttered spreadsheets that are difficult to keep up to date and cumbersome to use within the team or company.
